PROFESSIONAL SUMMARY

Full Stack Engineer with strong frontend specialization and experience building scalable web applications, enterprise platforms, realtime systems, and developer-focused products using React, Next.js, TypeScript, Node.js, and modern web technologies. Contributed 235+ merged pull requests across 185+ open-source projects within ecosystems including Stellar, Starknet, Ethereum, and Aztec. Experienced in building production-grade dashboards, dynamic frontend architectures, backend integrations, realtime applications, and scalable developer platforms while leading growing tech communities.

TECHNICAL SKILLS

Frontend

React.js, Next.js, TypeScript, JavaScript, Redux Toolkit, Tailwind CSS, shadcn/ui, Recharts, React Query

Backend

Node.js, Express.js, Next.js API Routes, REST APIs, Authentication Systems (Auth.js), MongoDB, PostgreSQL

Mobile

React Native, Expo

Web3

Wallet Integration, Cairo Smart Contracts, Stellar Ecosystem, Starknet, Ethereum

Tools & Platforms

Git, GitHub, Docker, Vercel, Supabase, Axios, WebSockets

Engineering Practices

Frontend Architecture, Backend Integration, State Management, API Design, Component Reusability, Database Design, Performance Optimization, Separation of Concerns

EXPERIENCE

Full Stack Engineer - My Prompt Hub

January 2025 - Present

- Contributed to the development of enterprise-grade frontend and backend-integrated systems using React, Next.js, TypeScript, Redux Toolkit, Tailwind CSS, and Node.js workflows.
- Built scalable and reusable UI systems for complex dashboards, workflow management tools, and enterprise platforms.
- Collaborated closely with frontend and backend engineers to integrate REST APIs, realtime features, authentication systems, and optimized data workflows.
- Worked on performance optimization, pagination improvements, filtering systems, and complex frontend state management across large applications.

NowForm

Enterprise Drag-and-Drop Form Builder

<https://nowform.vercel.app/>

- Engineered a robust drag-and-drop form building experience with dynamic rendering architecture and reusable schema-driven form systems.
- Designed and implemented complex Redux state management structures for dynamic form generation and rendering.
- Built support for embedded forms, shareable forms, e-signatures, and dynamic form interpretation from backend-provided schemas.
- Improved frontend maintainability through structured architecture and separation of concerns.

CMotos Vehicle Enterprise Management System (Coscharis)

- Contributed to the development of a vehicle enterprise management system for Coscharis Motors.
- Built interfaces and workflows for logistics management, importation tracking, vehicle workflows, PDI systems, and status management.
- Implemented backend integrations, optimized frontend performance, and improved pagination/ filtering workflows for large datasets.
- Collaborated within a frontend engineering team integrating with C#.NET backend systems.

React Native Frontend Developer - InHouse

February 2025 - April 2025

- Worked on a realtime React Native application focused on live ordering experiences during active voice calls between users and vendors.
- Redesigned major parts of the mobile application interface to improve usability and frontend consistency.
- Implemented socket-based realtime order transfer workflows and improved frontend code organization.
- Collaborated on maintaining realtime communication features and responsive mobile user experiences.

OPEN SOURCE CONTRIBUTIONS

Open Source Contributor

2024-Present

- Contributed 235+ merged pull requests across 185+ open-source projects.
- Actively contributed to ecosystems including Stellar, Starknet, Ethereum, Aztec, and other developer tooling projects.
- Selected among approximately 200 developers from over 8,000 applicants for the Only Dust Fellowship program.
- Collaborated with distributed engineering teams across open-source communities while improving frontend systems, developer tooling, and platform experiences.

Open Source Portfolio:

PROJECTS

BiteHub

Founder & Full Stack Engineer

<https://bitehubapp.com>

Campus-focused vendor ordering platform connecting students with food and snack vendors across university campuses.

Tech Stack: Next.js, TypeScript, MongoDB, Tailwind CSS, Paystack

- Architected and developed the platform as a solo engineer, handling both frontend and backend implementation.
- Built vendor onboarding systems, menu management workflows, order tracking systems, and scalable dashboard interfaces.

Designed backend data structures and API workflows for vendors, orders, menus, and customer interactions.

- Implemented responsive frontend systems optimized for mobile-first campus usage.
- Integrated authentication flows, database management, and payment workflow preparation for scalable future expansion.

COOU Techies Platform

<https://cooutechies.com>

Community management platform powering onboarding, announcements, and event management for the primary tech community within COOU.

- Built systems for student onboarding and event registration workflows.
- Implemented mass communication and announcement management features.
- Designed frontend systems focused on usability and scalability for growing student communities.

LEADERSHIP & COMMUNITY

Community Lead COOU Techies

2025 - Present

- Led one of the largest student tech communities within Chukwuemeka Odumegwu Ojukwu University (COOU).
- Organized technical learning sessions, mentorship activities, and developer-focused community programs.
- Mentored and taught over 500 students across frontend development and software engineering fundamentals.
- Helped students discover pathways into open source, software engineering, and developer communities.

EDUCATION

Bachelor of Science (B.Sc.) in Computer Science

Chukwuemeka Odumegwu Ojukwu University (COOU)

Expected Graduation: August 2027
